

We invite You to become a Media partner of the VIII International Robotics Forum 2026!

Hereby we inform that **from November 18 to November 20, 2026, in St. Petersburg**, as part of the Russian Robotics Week 2026 (RRW 2026), **the VIII International Robotics Forum** will be held, which is a unique Russian platform demonstrating advanced robotic products, programming and control systems for high-tech equipment, including the use of artificial intelligence systems.

The Forum website: <https://roboticsweek.ru/en/>

The key topic of the International Robotics Forum 2026: “Robotics, digitalization & AI: key components of technological sovereignty and a breakthrough to industrial leadership”.

Special attention is paid to Russia's role as a center of innovation attraction in the context of changing global technological alliances, from import substitution to the export of domestic robotic platforms.

After the entry into force of the Decree of the President of the Russian Federation dated May 7, 2024 "On the national development goals of the Russian Federation for the period up to 2030 with perspective up to 2036", and in particular its provision on "entering the Russian Federation into the top 25 leading countries in the world in terms of robotic density by 2030", robotics has attracted enormous interest both from state authorities and from potential users of such equipment.

According to the Decree, one of the key areas of the state's technological development, among others, is artificial intelligence. Its mechanisms ensure rapid, real-time decision-making based on the analysis of enormous volumes of information, so-called big data, which provides colossal advantages in quality and efficiency. At the same time, the battle for technological leadership, particularly in artificial intelligence, has become a global arena of competition. The Forum will focus on Russia's role as a center of gravity for innovation amid shifting global technological alliances—from import substitution to the export of domestic robotics platforms.

The Robotics Forum will include:

- an exhibition of robotic innovations, where companies from different countries will present their own developments for various industries;
- a conference on topical issues in robotics, automation, digitalization, seminars, workshops;
- joint sessions of vendors and industrial corporations implementing robotics (Vendor's Day);
- Robotics Skills competitions in 5 competencies: industrial robotics, robotic welding, additive production, digital production, lean production.

At the three-day robotics exhibition, manufacturers will be able to showcase robots and their components, robot control software, machine vision systems, gripping mechanisms, electronic components, and much more, demonstrating the profitability and efficiency of their products, and, as a result, engaging directly with potential customers.

The International Robotics Forum is the only event in Russia dedicated to all aspects of robotics (in mechanical engineering and metalworking, shipbuilding, railcar building, aerospace industry, oil and gas sector and offshore projects, machine tool building, instrument making and microelectronics, food production and agriculture, construction, warehouse logistics, textile and light industry, medicine and pharmaceuticals, entertainment industry, etc.).

Every year, the Forum brings together leading Russian and international experts in order to develop a strategy for reforming the robotics market, for introducing new approaches and technologies in this area, and for establishing effective interaction and cooperation with friendly countries. In 2025, the event was attended by more than 1,700 people: representatives of more than 970 industrial enterprises and 50 educational institutions from 53 regions of Russia and 15 countries.

Audience: managers, chief engineers and technical specialists of industrial enterprises, automation and digital transformation managers, system integrators, manufacturers of software for programming and controlling robots, technology parks and business incubators, representatives of government authorities, major research institutes and investors.

Key figures:

Exhibition: 1,000+ sq. m. of space, 40+ exhibitors,

Business program: 15 thematic sections, 70+ speakers,

Audience: 2,000+ visitors over 3 days

Event organizer: the High-Tech & Engineering Cluster Creonomyca. **General partner:** R-Pro Concern – a group of companies operating in the field of supply of high-tech products and services, industrial robotization, automation and system integration.

Date: from November 18 to November 20, 2026

Venue: Russia, St. Petersburg, PetroCongress Center (5, Lodeynopolskaya Street)

Format: offline

Visiting the RRW is free of charge, registration is required on <https://roboticsweek.ru/en/>

As part of the information partnership, the Organizing Committee offers the following opportunities

On the part of the Organizing Committee:

- Placement of your logo on the Forum website;
- The status of a Media Partner;
- Accreditation of the Partner's staff for the Forum (by registration on the website in the category Media);
- Distribution of your journals/printed materials at the Forum (up to 100 copies) – if they contain an article or advertisement about the Forum or its organizer.

On the part of the Media partner:

- Placement of the Forum logo/advertising banner on your website;
- Placement of press and post-release of the Forum;
- Posting interviews with organizers/participants or an expert article;
- Photo or video report about the Forum.

We are open to your counter offers and looking forward to our mutually fruitful cooperation!

The Organizing Committee of RRW-2026:
